

Attainu Question ID: 244

Q. Create the following routes and implement specific functionalities in the mentioned routes accordingly:

**GET /product**

1. Display an HTML form here where user can enter a product name and its price.

**POST /product**

1. Save the incoming product form data from the HTML form into a database collection named *products* in MongoDB Atlas.

**GET /user**

1. Display an HTML form here where user can enter his name and email id.

**POST /user**

1. Save the incoming user form data from the HTML form into a database collection named *users* in MongoDB Atlas.

**GET /**

1. Fetch data from *users* and *products* collection and send back these data to the browser as a JSON object.

**Note**

- You can refer to Mongoose Docs or [Mong oDB package docs](#) if/when needed.
- You must sign up on MongoDB Atlas and use the DB URL to connect to your database in Atlas
- Focus on functionality and not the styling.

**Marking Scheme**

[Correct Code Execution: 10, Correct Approach: 2, Code Readability: 3]
